

BabelStreamer OBS Transcriber (obs-whisper-ws)

The full manual for the plugin is available on <https://www.babelstreamer.com/manual.html> - this file is a quickstart guide

How to Install

The installer is packaged together with this document. Just run the installer and it will install the plugin in the correct OBS plugin directory. You can then access it just like any other OBS filter. Add the filter to any audio source to use it.

Configuring the filter

Once the filter is installed you must, at a minimum, use the "download standard model" button to download the standard speech recognition model.

Next you link the filter to your account with the "Connect Account" Button. Basic setup is now complete.

Streaming with BabelStreamer

When you start streaming BabelStreamer will start working as soon as it detects speech (or you can start detection before you stream by deselecting the "only connect when streaming" checkbox).

Once you have a connection you will receive a code. Display this code somewhere to let your viewers know how to connect to the translations.

Streaming with BabelStreamer

There is an explainer for viewers in all available languages at <https://www.babelstreamer.com/watch.html> - send this link to your viewers
